“PROPORTIONS IN ARCHITECTURE” TRANSFORMATION OF IDEAS INTO REALITY

**BLDEA TECHNICAL CAMPUS, VIJAYAPURA (Department of Architecture)
IN ASSOCIATION WITH THE INSTITUTION’S INNOVATION COUNCIL (IIC)**

Event Cordinators:

Prof.Sahifa .A. Pathan & Prof.Bhavani .R. Kulkarni

Department of Architecture

Background & Need

In general, connected with *architecture*, the term *proportion* is *composition* of regular polygons, such as triangles, squares, hexagons, and pentagons. Proportion is a **central principle of architectural theory** and an important connection between mathematics and art. It is the visual effect of the relationships of the various objects and spaces that make up a structure to one another and to the whole.

The main objective of this webinar is always **to strike the best balance between scale**, that is the size of forms relative to others, and the harmonious relationship between the parts. Both scale and proportion have shaped the course of architecture through the ages.

Contents of Program

The webinar is jointly conducted by **Department of Architecture, BLDEA Technical Campus, Vijayapura and Institution’s Innovation Council (IIC)**. The webinar focused on Architecture which is both **the process and product of planning, designing, and constructing form, space, and ambience** that reflect functional, technical, social, and aesthetic considerations. Architectural design usually must address both feasibility and cost for the builder, as well as function and aesthetics for the user..

Target Participants

All UG Students, Architects, Engineers, Research scholars and faculty members have attended the event.

No. of Participated: 82

Name of the Resource person

Ar. Pankaj Upadhye
Architect and Town Planner,
ADTP, Solapur
Maharastra, India

Details of discussion in the webinar

AR. PANKAJ UPADHYE

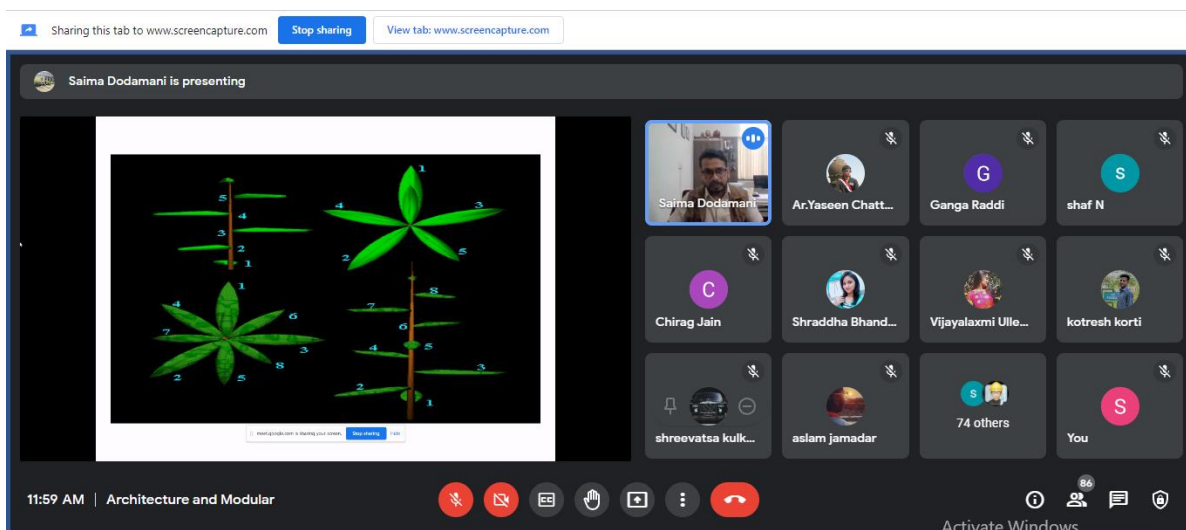

Ar. Pankaj Upadhye highlighted the importance of experience.

He detailed the share of golden proportion based Architecture in terms of social, physical, cultural, Political, Economic Condition.

He explained the details of visual effect of the relationships of the various objects and spaces that make up a structure to one another and to the whole.

The Golden Proportion rule how it got derived from traditional architecture to contemporary era of digitally driven through social networks.
